Symantec™ ServiceDesk 8.5 RU3 Release Notes

Symantec™ ServiceDesk 8.5 RU3 Release Notes

Legal Notice

Symantec Support

All support services will be delivered in accordance with your support agreement and the then-current Enterprise Technical Support policy.

Contacting Technical Support

Customers with a current support agreement may access Technical Support information at the following URL:

www.symantec.com/business/support/

Before contacting Technical Support, make sure you have satisfied the system requirements that are listed in your product documentation. Also, you should be at the computer on which the problem occurred, in case it is necessary to replicate the problem.

When you contact Technical Support, please have the following information available:

■ Product release level

■ Hardware information

■ Available memory, disk space, and NIC information

■ Operating system

■ Version and patch level

■ Network topology

■ Router, gateway, and IP address information

■ Problem description:

   ■ Error messages and log files

   ■ Troubleshooting that was performed before contacting Symantec

   ■ Recent software configuration changes and network changes

Licensing and registration

If your Symantec product requires registration or a license key, access our technical support Web page at the following URL:

www.symantec.com/business/support/

ServiceDesk 8.5 RU3 release notes

This document includes the following topics:

- About ServiceDesk
- Installing ServiceDesk
- Upgrading to ServiceDesk 8.5 RU3
- Migrating to ServiceDesk 8.5
- Migrating data to ServiceDesk 8.5
- Fixed issues
- Known issues
- Other things to know
- Where to get more information

About ServiceDesk

Symantec ServiceDesk improves your infrastructure's service management.

It is ITIL-based and includes all of the primary ITIL Service Management processes. These processes include Incident Management, Problem Management, Change Management, and Knowledge Management. ServiceDesk also includes a Service Catalog that lets your users choose service items. It also includes an Active Directory Self-Service Catalog that lets users easily and securely reset passwords and access network shares.

ServiceDesk uses the Symantec Workflow framework to manage service tickets, provide reports, and integrate with the Configuration Management Database (CMDB).

You can configure ServiceDesk to meet your organization's specific requirements. These configuration options include setting up business hours, rule execution which can perform a variety of actions on incidents, changes, and problems, including routing, automated email generation, and incident messaging. You can implement advanced customizations. These customizations may include creating data types, modifying feeder forms, modifying the Process View page, and adding fields to reports.

For more information, see the following:

Symantec™ ServiceDesk 8.5 Implementation Guide

Symantec™ ServiceDesk 8.5 User Guide

For videos and articles, join the Symantec sponsored ServiceDesk user group on Symantec Connect:

For continuous documentation updates, subscribe to the following forum on Symantec Connect:

https://www.symantec.com/connect/product/servicedesk

Installing ServiceDesk

You can install ServiceDesk as a standalone product but it requires installation of Symantec Management Platform on a separate server for licensing purposes. You can also install ServiceDesk and use it along with the other products in the IT Management Suite, as long as ServiceDesk is installed on its own server.

Before you install ServiceDesk on the ServiceDesk server, see the topic "ServiceDesk scalability" in the *Symantec™ ServiceDesk 8.5 Implementation Guide* at:

http://www.symantec.com/docs/DOC11085

Things to know about the ServiceDesk installation process:

- ServiceDesk 8.5 RU3 is compatible with Symantec Management Platform version 8.5 RU3.

- You use the Symantec Installation Manager (SIM) to install the ServiceDesk Solution software.
  The ServiceDesk Solution software grants you access to the ServiceDesk Server installer.

- You use the ServiceDesk server installer to install the ServiceDesk application on your designated server.

For information about installing ServiceDesk, see the *Symantec™ ServiceDesk 8.5 Implementation Guide* at:

http://www.symantec.com/docs/DOC11085

For information about installation of Symantec Management Platform 8.5 or IT Management Suite 8.5, see the Symantec™ IT Management Suite 8.5 Installation and Upgrade Guide.

Upgrading to ServiceDesk 8.5 RU3

You can perform an in-place, same-server upgrade to ServiceDesk 8.5 RU3.

When you upgrade ServiceDesk from previous versions to 8.5 RU3, Symantec Management Platform is also upgraded to version 8.5 RU3.

The supported upgrade paths to ServiceDesk 8.5 RU3 are as follows:

- 8.5

- 8.5 RU1

- 8.5 RU2

The ServiceDesk upgrade process includes the following steps:

1. Upgrade ServiceDesk Solution

   Use the Symantec Installation Manager (SIM) to upgrade the ServiceDesk Solution software. In the Symantec Installation Manager, click **Upgrade installed products** and then choose to install ServiceDesk Solution.

   After you select ServiceDesk in SIM, the Symantec Management Platform gets also selected as dependency.

2. Use the ServiceDesk server installer to upgrade the ServiceDesk application on your ServiceDesk server.

   The ServiceDesk Solution software grants you access to the ServiceDesk server installer.

   Note: Before you upgrade, close all the **Email Monitoring** tickets to ensure that the related **Incident Management** process is created properly.

Migrating to ServiceDesk 8.5

Existing ServiceDesk customers using ServiceDesk versions earlier than 8.0 must migrate to ServiceDesk 8.5, which involves migrating to new hardware. This migration includes both the ServiceDesk server and a new Process Manager database instance. You should plan to install ServiceDesk in a new environment, separate from your existing ServiceDesk server. An in-place upgrade path is not available for pre-8.0 versions of ServiceDesk. Symantec does not support attempts to install 8.5 over a pre-8.0 version of ServiceDesk. You must run both systems in parallel until your previous tickets are closed and necessary data is migrated to your ServiceDesk 8.5 environment.

Things to know about the ServiceDesk migration process:

- You must first upgrade or migrate your instance of the Symantec Management Platform (and IT Management Suite if installed) to any of the following compatible versions:

  - 8.5

  - 8.1

  - 8.0

  - 7.6

  - 7.5 SP1

- You use the Symantec Installation Manager (SIM) to install or upgrade the ServiceDesk Solution software on the Symantec Management Platform.
  The ServiceDesk Solution software grants you access to the ServiceDesk server installer.

- You use the ServiceDesk server installer to install the ServiceDesk application on your new designated server.

For information about migrating to ServiceDesk 8.5, see the topic "Migrating to ServiceDesk 8.5" in the *Symantec™ ServiceDesk 8.5 Implementation Guide* at:

http://www.symantec.com/docs/DOC11085

For information about migrating to Symantec Management Platform 7.5, see the Symantec™ IT Management Suite 6.x to 7.5 Migration Guide or Symantec™ IT Management Suite 7.0 to 7.5 Migration Guide.

Migrating data to ServiceDesk 8.5

You can use some of the data from ServiceDesk 7.0 MR2, 7.1 SP1, 7.1 SP2, 7.5, 7.5 SP1, 7.6 in ServiceDesk 8.5. You can migrate incidents, change requests, problems, and other data. You can access this historical ticket data from ServiceDesk 8.5 for reporting purposes.

For more information about migrating data to ServiceDesk 8.5, see the topic "About migrating data to ServiceDesk 8.5" in the *ServiceDesk 8.5 Implementation Guide* at:

http://www.symantec.com/docs/DOC11085

Fixed issues

The following are the issues from the previous releases that are fixed in this release.

Table 1-1   Fixed issues for ServiceDesk

Issue	Article link
An application error message is displayed if you have no business services configured on the Notification Server, and then select **Edit Business Services** while editing an incident.	N/A
It is only possible to update the list of strings to check for in an inbound email subject by editing and republishing the **Email Monitor** project.	N/A
In the Problem Management process, on the **Examination and Analysis** page, clicking **Save and Close** does not update the problem process data.	N/A
Associated assets are incorrectly displayed on the **SD Asset View** page.	N/A
On the **Submit Problem** page, clicking **Create New Problem** causes an application error and fails to create the problem ticket.	N/A
On the **Submit Change Request** page, the option **Change Needed By** renders according to UTC time.	N/A

Known issues

The following are known issues for this release. If additional information about an issue is available, the issue has a corresponding article link.

For the most up-to-date information, latest workarounds, and other technical support information about this solution, see the Technical Support knowledge base.

Table 1-2   Known issues

Issue	Article link
On the **Reports > Service and Asset Management > ServiceDesk > Find Servicedesk Changes For Asset** page the URL listed in the **URLtoChange** column does not open a webpage. Workaround: Manually copy the URL and paste it in a new browser window.	TECH230728

Table 1-2 Known issues *(continued)*

Issue	Article link
Characters or symbols such as apostrophe, which are included in the text that is submitted through ServiceDesk forms are displayed as html-encoded in the Process View page, and in any subsequent form control where the Remove HTML option is not selected. In the latter case, an application error can occur because HTML that is detected in a form raises a security-related exception in the workflow engine when the form is submitted. This issue has two symptoms: 1 Some characters or symbols that were captured in ServiceDesk forms appear encoded in the process header Web Part on the Process View page. For example, the apostrophe symbol becomes '. This is caused by the fact that the Web Part itself is configured to ignore the HTML content. The content itself is fine. 2 All text controls have a configurable option to ignore HTML content (here it is called Remove HTML). This option should be selected every time, but there are a few places in Problem Management forms where it is not. This means that the encoded characters display in the text box on that form and when you attempt to submit the form, the workflow engine detects illegal characters, and throws an error. *continued*	N/A

Workaround:
 	
For each of the custom Process View pages that are provided with ServiceDesk, open the Process Info Web Part editor and disable HTML escaping. To do this action, complete the following steps:
 	
Step 1
 	
1 Log in as administrator.
 	
2 Go to **Site Actions** and select **Page List**.
 	
3 On the left navigation pane, expand **Process View pages** and click **SD Incident View**.
 	
4 Click **Go to Page**.
 	
5 Go to **Site Actions** and select **Modify Page** > **Edit Page**.
 	
6 On the **Ticket Overview** Web Part, click **Edit** to open the Web Part configuration screen.
 	
    Note: The Process Info Web Part may be titled differently on other pages.
 	
7 Select to clear the **Escape** check box.
 	
8 Click **OK**.
 	
Repeat for any other instances of Process Info Web Part on the affected page and then repeat for all the affected Process View pages.
 	
Step 2
 	
1 Open the package **SD.Forms.ProblemManagement** in the designer.
 	
2 Open the following forms and for all text boxes ensure that **Remove HTML** option is selected in the **Functionality** tab.
    ■ Review Rejection Reason.
    ■ Verify Problem.
    ■ Create Fix for Problem.
    ■ Approve Proposed Fix/Workaround.
    ■ Schedule Request.
 	
3 After completing all the forms, publish the project.	

Other things to know

The following are things to know about this release. If additional information about an issue is available, the issue has a corresponding Article link.

Table 1-3   Other things to know

Issue	Article link
The session timeout for Process Manager is changed from number of days to number of minutes. Additionally, the default session timeout is changed from 90 days to 90 minutes. After the configured session timeout in minutes, the user needs to log on to access Process Manager.	N/A
Incident Management requires setup and is not fully functional out-of-the-box. See the *About configuring ServiceDesk* topic in the *Symantec™ ServiceDesk 8.5 Implementation Guide*.	N/A
Change Management requires setup and is not fully functional out-of-the-box. See the *About configuring ServiceDesk* topic in the *Symantec™ ServiceDesk 8.5 Implementation Guide*.	N/A
Symantec has improved security controls on the Workflow Server. The improved security can potentially block the ability to deploy from a local Workflow Designer to a remote Workflow Server. If you cannot deploy to a remote Workflow Server, change the following setting on the remote Workflow Server before attempting to deploy. **To allow remote connections:** ■ On the Workflow Server, right-click on the **Task Tray Tool** and click **Settings**. ■ In the **Workflow Server** section next to **Workflow Server Configuration**, click the ellipsis. ■ In the **General** section, check **Allow Remote Connections**. Please note that the Symantec security best practice is to revert this setting after you are finished deploying. For more information on Symantec security best practices, see the article *ServiceDesk/Workflow General Security Best Practices*.	DOC6160

Table 1-3   Other things to know *(continued)*

Issue	Article link
Changes in ServiceDesk documentation: ■ The *ServiceDesk Solution Software User Guide* has been deprecated. The instructions that were in this guide are now in the *ServiceDesk Implementation Guide* and *ServiceDesk User Guide*. ■ The *ServiceDesk Portal User Guide* has been deprecated. The instructions that were in this guide are now in the *ServiceDesk User Guide*. ■ The *ServiceDesk Customization Guide* has been deprecated. Because of the changes to ServiceDesk, most of the customizations can be accomplished in the Process Manager portal. Some advance customizations can still be accomplished by editing the workflow processes. See the *Configuring ServiceDesk* and *Advanced ServiceDesk customizations* topics.	N/A

Where to get more information

Use the following documentation resources to learn about and use this product.

Table 1-4   Documentation resources

Document	Description	Location
Release Notes	Information about new features and important issues.	The **Supported Products A-Z** page, which is available at the following URL: http://www.symantec.com/business/support/index?page=products Open your product's support page, and then under **Common Topics**, click **Release Notes**.
User Guide	Information about how to use this product, including detailed technical information and instructions for performing common tasks.	■ The Documentation Library, which is available in the Symantec Management Console on the **Help** menu. ■ The **Supported Products A-Z** page, which is available at the following URL: http://www.symantec.com/business/support/index?page=products Open your product's support page, and then under **Common Topics**, click **Documentation**.
